activity_main.xml × strings.xml × MainActivity.java ×

LinearLayout TextView

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/
  xmlns:tools="http://schemas.android.com/tools"
  android:layout_width="match_parent"
  android:layout_height="match_parent"
  android:orientation="vertical"
  android:padding="30dp"
  android:paddingBottom="@dimen/activity_vertical_margin"
  android:paddingLeft="@dimen/activity_horizontal_margin"
  android:paddingRight="@dimen/activity_horizontal_margin"
  android:paddingTop="@dimen/activity_vertical_margin"
  tools:context="com.sanghoon.helloandroid.MainActivity">

  <TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="TextView Practice 1"
    android:id="@+id/textView1"/>

  <TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="TextView Practice 2"
    android:id="@+id/textView2"/>

  <TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="TextView Practice 3"
    android:id="@+id/textView3"/>

</LinearLayout>
```

android:maxLines

Makes the TextView be at most this many lines tall. When used on an editable text, the `inputType` attribute's value must be combined with the `textMultiLine` flag for the maxLines attribute to apply.

May be an integer value, such as "100".

Related methods:

`setMaxLines(int)`

References

Added in API level 1

android:maxLines

int: the maximum height of TextView in terms of number of lines

```
setLines(int)
```

```
activity_main.xml x strings.xml x MainActivity.java x
package com.sanghoon.helloandroid;

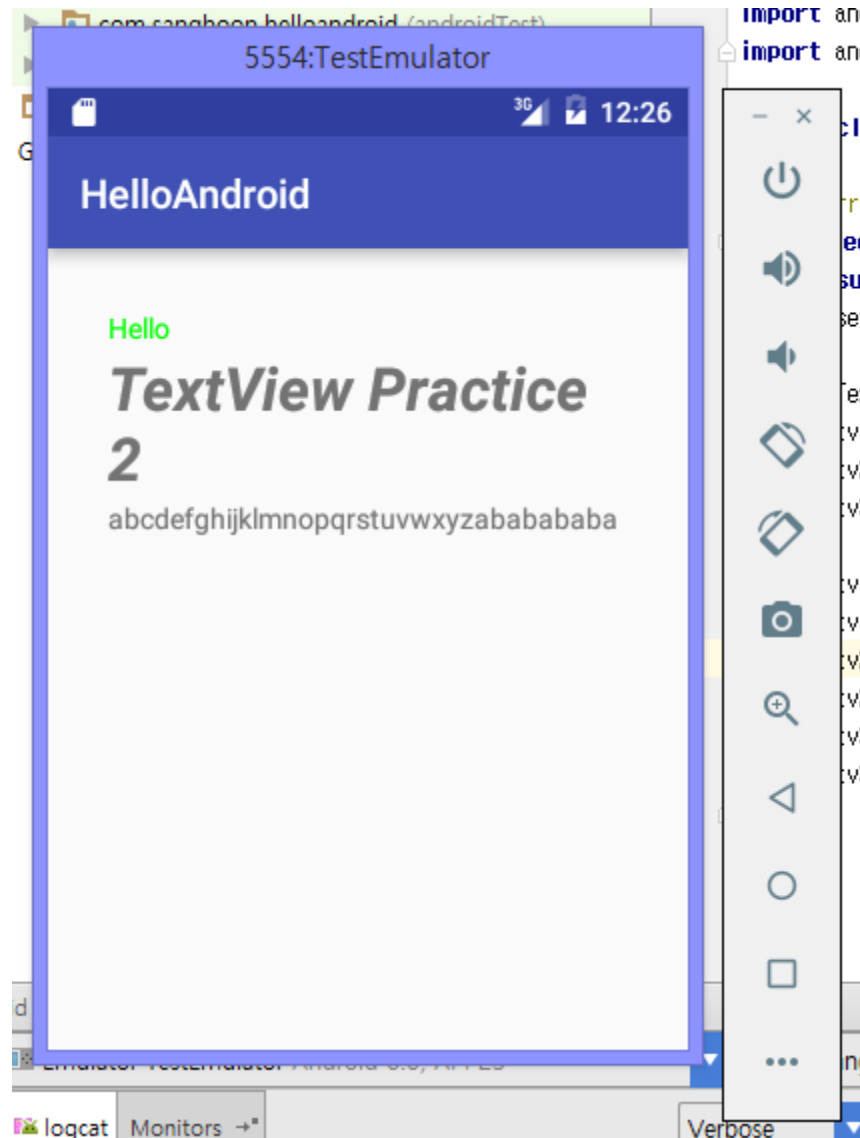

import android.graphics.Color;
import android.graphics.Typeface;
import android.os.Bundle;
import android.support.v7.app.AppCompatActivity;
import android.widget.TextView;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        TextView tv1, tv2, tv3;
        tv1 = (TextView) findViewById(R.id.textView1);
        tv2 = (TextView) findViewById(R.id.textView2);
        tv3 = (TextView) findViewById(R.id.textView3);

        tv1.setText("Hello");
        tv1.setTextColor(Color.GREEN);
        tv2.setTextSize(30);
        tv2.setTypeface(Typeface.SANS_SERIF, Typeface.BOLD_ITALIC);
        tv3.setText("abcdefghijklmnopqrstuvwxyzaabababababababcccccccccccccc");
        tv3.setMaxLines(1);
    }
}
```

<code>android:drawableTintMode</code>	Blending mode used to apply the compound (left, top, etc.) drawables tint.
<code>android:drawableTop</code>	The drawable to be drawn above the text.
<code>android:editable</code>	If set, specifies that this TextView has an input method.
<code>android:editorExtras</code>	Reference to an <code><input-extras></code> XML resource containing additional data to supply to an input method, which is private to the implementation of the input method.
<code>android:elegantTextHeight</code>	Elegant text height, especially for less compacted complex script text.
<code>android:ellipsize</code>	If set, causes words that are longer than the view is wide to be ellipsized instead of broken in the middle.
<code>android:ems</code>	Makes the TextView be exactly this many ems wide.
<code>android:enabled</code>	Specifies whether the widget is enabled.

android:ellipsize

If set, causes words that are longer than the view is wide to be ellipsized instead of broken in the middle. You will often also want to set `scrollHorizontally` or `singleLine` as well so that the text as a whole is also constrained to a single line instead of still allowed to be broken onto multiple lines.

Must be one of the following constant values.

Constant	Value	Description
end	3	
marquee	4	
middle	2	
none	0	
start	1	

Related methods:

[setEllipsize\(TextUtils.TruncateAt\)](#)

setEllipsize

Added in API level 1

```
public void setEllipsize (TextUtils.TruncateAt where)
```

Causes words in the text that are longer than the view's width to be ellipsized instead of broken in the middle. You may also want to `setSingleLine()` or `setHorizontallyScrolling(boolean)` to constrain the text to a single line. Use `null` to turn off ellipsizing. If `setMaxLines(int)` has been used to set two or more lines, only `TextUtils.TruncateAt.END` and `TextUtils.TruncateAt.MARQUEE` are supported (other ellipsizing types will not do anything).

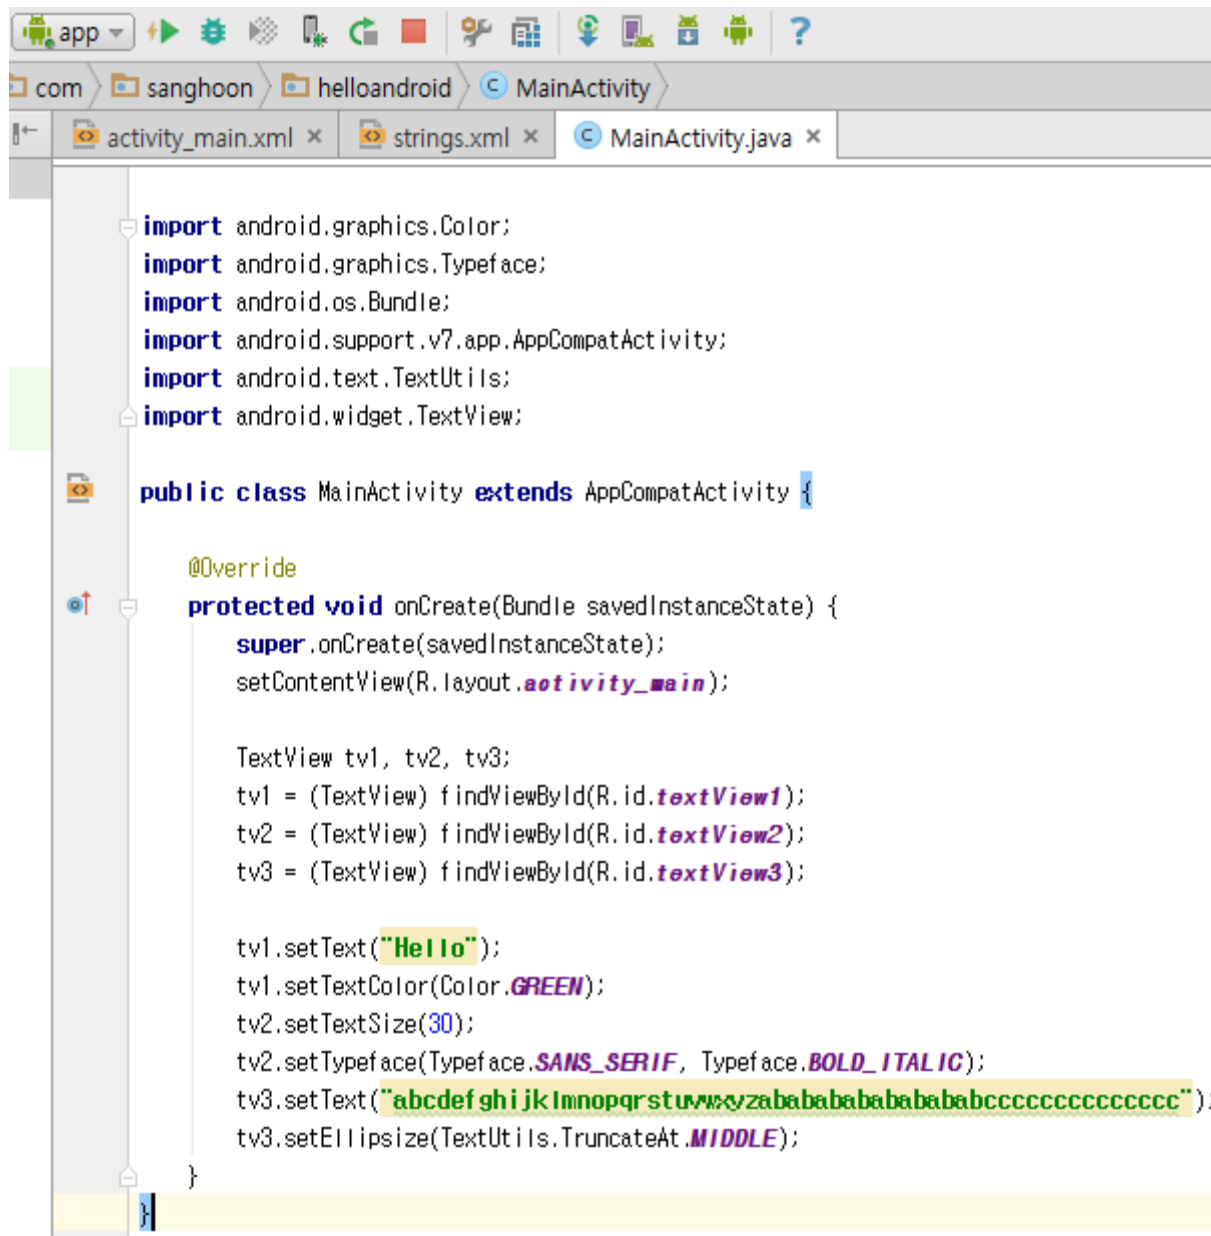

Related XML Attributes:

[android:ellipsize](#)

Parameters

where

TextUtils.TruncateAt

```
import android.graphics.Color;
import android.graphics.Typeface;
import android.os.Bundle;
import android.support.v7.app.AppCompatActivity;
import android.text.TextUtils;
import android.widget.TextView;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        TextView tv1, tv2, tv3;
        tv1 = (TextView) findViewById(R.id.textView1);
        tv2 = (TextView) findViewById(R.id.textView2);
        tv3 = (TextView) findViewById(R.id.textView3);

        tv1.setText("Hello");
        tv1.setTextColor(Color.GREEN);
        tv2.setTextSize(30);
        tv2.setTypeface(Typeface.SANS_SERIF, Typeface.BOLD_ITALIC);
        tv3.setText("abcdefghijklmnopqrstuvwxyzaabababababababcccccccccccc");
        tv3.setEllipsize(TextUtils.TruncateAt.MIDDLE);
    }
}
```
